(Independent verifier approved by EPD Norway)

#### **Product**

### **Product description:**

Offshore Kemiitti is a bulk emulsion explosive used for underwater stoping applications.

Offshore Kemiitti is produced at Vihtavuori production plant in Finland. Finalized product is packed in IBC containers, which are transported by truck to Forcit's warehouses, and further to the user sites. Lubricating water is added to the product when pumping it into a borehole on user site. Empty IBC containers are transported back to the production plant for reuse.

# Product specification:

Energy content of Offshore Kemiitti: 4.4 MJ/kg

Materials	%
Ammonium nitrate	60-75
Aluminium powder (stabilized)	4-14
Lubricating oils (petroleum), C20-C50, hydrotreated neutral oilbased	1-6

#### Technical data:

1 kg of bulk emulsion explosive.

EC-type examination certificates: CE0589 (BAM, Germany), PvTT 132/04

#### Market:

Nordic Countries (Finland, Sweden, Norway)

#### Reference service life, product:

Reference service life is not relevant to Explosives. Explosives are used only once.

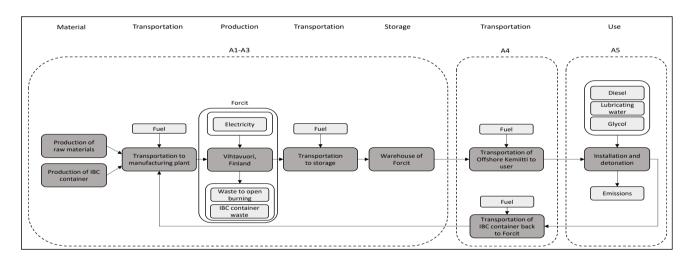

# LCA: Calculation rules

#### **Declared unit:**

1 kg of manufactured, installed and used (detonated) product.

#### System boundary:

Flow chart is presented below. The main unit processes of each life cycle stage are presented in the dark grey boxes. The main background processes and detonation emissions are presented in the light grey boxes.

# Data quality:

Specific data is used to model A4 transportation, detonation stage and production operations at Vihtavuori plant. Specific data represent year 2018. Locations of raw material suppliers and A2 transportation of raw materials are partly modelled based on specific data.

Generic data is used to model the production of raw materials, energy etc. (background processes). Generic data is mainly from Gabi Professional database. Ecoinvent database and literature sources are also used to fill data gaps. Characterization factors are based on EN 15804:2012. Ozone depletion potential result is deemed the most uncertain of the assessed environmental impact results due to the usage of secondary data that includes CFCs.

Data used is not older than 10 years.

# **Cut-off criteria:**

All major raw material and energy inputs are included. Production processes of specific raw materials and energy flows that are used in minor quantities (<1% of total mass input or energy use of a unit process) are not included in the assessment. This cut-off rule does not apply for hazardous materials and substances.

#### Allocation:

Allocation is conducted in accordance with the provisions of EN 15804. Energy and water inputs, and municipal waste generated are allocated equally among all products manufactured at the Vihtavuori plant through mass allocation. Influence of primary production of a recycled material is allocated to the main product for which the material was used. The recycling process and transportation of the material is allocated to this analysis.

# LCA: Scenarios and additional technical information

The following information describes the scenarios in the different modules of the EPD.

Offshore Kemiitti is produced at Vihtavuori production plant in Finland where the product components are mixed and the final product is packed in IBC containers. The IBC containers are transported to user sites via Forcit's warehouses. The storage and most of the final users of Offshore Kemiitti are located in Finland. Empty IBC containers are transported back to Vihtavuori plant. Containers can be used approximately 2,5 times before they are removed from service.

Diesel is used in pumping equipment on installation stage (A5-1). Additionally, lubricating water is added in A5-1 stage. Glycol is used in wintertime for frost protection.

The detonation emissions are calculated based balanced chemical reaction at final stage and in 1 bar.

The key calculating values related to A4, A5-1 and A5-2 stages are presented in tables below.

# Transportation from production plant to storage (A2 internal transportation)

Туре	Capacity utilization (one way) %	Type of vehicle	Distance* km	Fuel consumption	Value
Truck	100	EURO 5 truck	254	l/tkm	0,03

<sup>\*</sup>One-way distance is applied. On return trip capasity utilization is 50% and the distance is the same.

#### Transport from storage to user (A4)

Type	Capacity utilization (incl. return) %	Type of vehicle	Distance** km	Fuel consumption	Value
Truck	75	EURO 5 truck	260	l/tkm	0,03

<sup>\*\*</sup> Transportation distance is from storage to user, including return trip.

# Installation stage of explosive (A5-1)

	Unit	Value
Product	kg	1
Lubricating water	kg	0,025
Glycol	kg	0,00095
Diesel	liters	0,003

#### Detonation stage of explosive (A5-2)

Detoriation stage of explosive (A3-2)								
Unit	Value							
kg	0							
kg	0,005							
kg	0,036							
kg	0,408							
kg	0,22							
kg	0							
kg	0,058							
	Unit kg kg kg kg kg kg							

<sup>\*</sup> Formed in secondary reactions.

# LCA: Results

Life cycle stages A1-A5 are included. The environmental impact results and LCI results related to inputs and outpust are presented per declared unit (1 kg of manufactured, installed and detonated product). Results are calculated according to the EN 15804:2012 requirements.

# System boundaries (X=included, MND= module not declared, MNR=module not relevant)

# **Additional Norwegian requirements**

#### Greenhous gas emission from the use of electricity in the manufacturing phase

Basic grid mix electricity is used at Vihtavuori production plant. Average electricity grid mix of Finland is modelled with Gabi Professional database. All the necessary background data is included. Country specific individual characteristics are considered. Data represents year 2016.

Data source	Amount	Unit
Gabi Professional database. Electricity grid mix of Finland.	0,174	kg CO <sub>2</sub> -eq./kWh

# **Dangerous substances**

- The product contains no substances given by the REACH Candidate list or the Norwegian priority list
- The product contains substances given by the REACH Candidate list or the Norwegian priority list that are less than 0,1 % by weight.
- ☐ The product contains dangerous substances, more then 0,1% by weight, given by the REACH Candidate List or the Norwegian Priority list, see table.
- The product contains no substances given by the REACH Candidate list or the Norwegian priority list. The product is classified as hazardous waste (Avfallsforskiften, Annex III), see table.

Name	CAS no.	Amount
Ammonium nitrate	6484-52-2	60-75%
Aluminium powder (stabilized)	7429-90-5	4-14%
Lubricating oils (petroleum), C20-C50, hydrotreated neutral oilbased	72623-87-1	1-6%

#### Indoor environment

No tests have been carried out on the product concerning indoor climate. Not relevant.

#### **Carbon footprint**

Carbon footprint has not been worked out for the product.
