

Invitation for webinar:

Sustainability criteria and environmental declarations for PV

Date and time: June 26th, 2020, 10-11.30 (CET)

Place: Zoom

Registration: <https://forms.gle/1y1e4kS83GAXDh2X7>

Program: <http://solenergiklyngen.no/aktiviteter/webinar-sustainablemanufacturingofpv/>

Solar panels are a source of green electricity production. Once installed they provide sustainable local production of energy.

As all products also solar panels have an environmental impact from the manufacturing processes.

Lately an increased interest in the sustainability of the whole lifecycle has arisen. There is a question of how to distinguish between the environmental impact of different panels. A standardized method for providing information on the environmental impact is sought after.

The Norwegian EPD Foundation, public sector and partners of the Norwegian Solar Energy Cluster have developed an answer to this.

The very important component in order to make EPDs (Environmental Product Declarations), the so-called PCR (Product Category Rules) for solar panels are in place and can make the foundation for an even more sustainable solar business.

The webinar is a launch for the PCR for PV, making a foundation for standardized EPDs. The rules are common for Europe and an EPD is valid across Europe and can also be used world-wide. The launching of the PCR is a mayor step for even more sustainable solar panel manufacturing.

Sign up for the webinar to learn more about:

- Sustainability in manufacturing of solar panels
- How procurers can use the information to procure even greener solar panels
- Drivers for sustainable manufacturing

Join us in the quest for an even more sustainable future
