Product

Product description:

Lightweight expanded clay aggregate is a granular ceramic material made from natural clay. The clay is mixed with organic material, dried and expanded to 3-4 times its original volume in rotary kilns at temperatures of about 1150 °C. The output lightweight expanded clay aggregate granules, in the range 0-32 mm, are sieved and blended into different grades of products and distributed in bulk.

Product specification

The EPD describes results for production of lightweight expanded clay aggregate, grading 0-32 mm, at Leca Kuusankoski. For calculations of environmental data for other types of Leca than Leca -sora 4-32, densities from the table of different gradings should be used. The average annual production of lightweight expanded clay kiln material at Leca Kuusankoski has a weight of 0,28 ton/m³.

LCA: Calculation rules

Declared unit:

1 m3 Leca®-sora 4–32

Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

Allocation:

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Data quality:

Specific data for the product composition are provided by the manufacturer. They represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on registered EPDs according to EN 15804, Ostfold Research databases, ecoinvent and other LCA databases. The data quality of the raw materials in A1 is presented in the table below.

Materials	Source	Data quality	Year
Coating materials	ecoinvent 3.4	Database	2017
Dolomite	ecoinvent 3.4	Database	2017
Filler	ecoinvent 3.4	Database	2017
Clay	Specific data	Database	2018
Heavy oil	LCA.no	Database	2019
Waste products	LCA.no	Database	2019

System boundary:

The system boundary of the EPD follows the modular structure in line with EN 15804. This section describes the modules which are contained within the scope of this study. As the scope of the assessment is up to the point at which the lightweight clay aggregate is manufactured modules A1- A4 have been considered in this LCA
